FALL 2016 JUNIOR COMMUNICATIONS PACKET

We hope you are enjoying these final days of summer, and are looking forward to the new year!

This document contains important information to help you prepare for your Junior year in HEB. **Please read it carefully!** If you have questions, please email Brenda or Carole.

Meet with Brenda or Carole well before Study Card Day! Please see the Contact Us section of the Life Sciences website for our open office hours during shopping week (and check for updates before you stop by). Besides getting your study card (now known as "Crimson Cart") signed, meet with us for general advising on matters such as requirements, course selection, and post-graduation plans. As a Junior, you'll want to ensure you've outlined a plan to meet all your concentration requirements, and you might want to discuss honors options (see below).

Please don't wait until Course Registration Deadline (formerly Study Card Day) to meet! By coming in earlier, we can have a more in-depth meeting.

Which courses should you take this year?

If you haven't yet taken **LS 1a** and **LS 1b**, you should take them this year.

You should take your **Junior Research Seminar (JRS)** this year. Note that most have limited enrollments, and some have prerequisites. Qualifying courses are labeled "research seminar" on the HEB course list.

If you haven't yet fulfilled your Evolution subfield requirement, we strongly encourage you to take SLS 16 this Spring semester.

Honors options.
Information can be found in the HEB Honors Info section of the Life Sciences Concentrations website. We will hold a meeting for Juniors in late September with information about honors (we'll be in touch with details later).

91r.
If you are planning on a 91r this semester, you must complete a 91r enrollment form, have your 91r instructor sign it, and return it to Dr. Hooven or me by the course registration deadline.

We look forward to seeing you soon!

Best wishes,

Carole & Brenda
